Development of forest machinery and labour in the EU in 2010-2030

Antti Asikainen, Perttu Anttila, Hans Verkerk, Olalla Diaz,
Dominik Röser

Finnish Forest Research Institute (Metla)

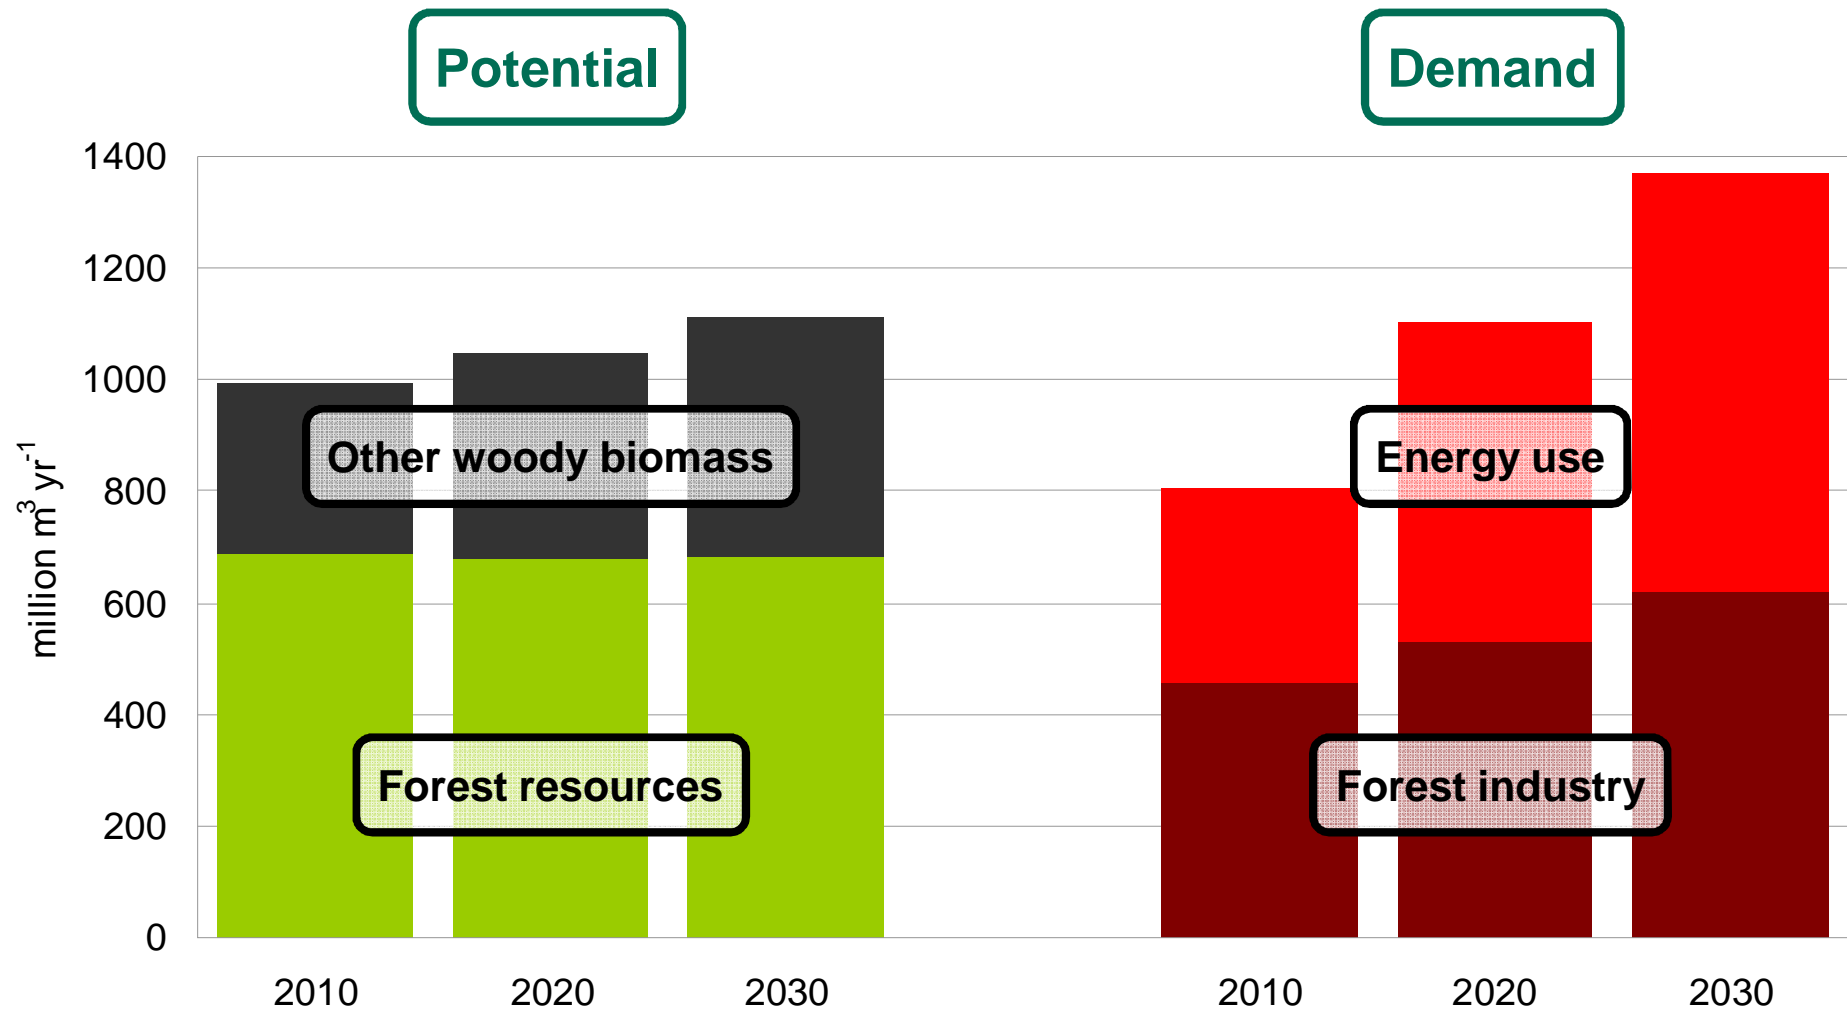

FORMEC 2011

10.10.2011, Graz, Austria

Storyline

- Wood supply and demand in EU
- Machinery and labour demand
- Harvesting technology
 - Roundwood
 - Energy wood
- R&D drivers and trends
- Conclusions

Woody biomass supply and demand in EU

Forest biomass supply in EU

Annual capacities of machines

	Timber	Energy Stemwood	Energy Residues	Energy Stumps	Energy Early Thinning
Harvester	35 000	35 000			10 000
Excavator				17 000	
Forwarder	35 000	35 000	30 000	30 000	30 000
Chipper		30 000	30 000	30 000	30 000
Truck	30 000	30 000	18 000	18 000	18 000

Forest machine and transport demand

Harvesting and transport fleet demand

Labour demand

Average annual storage volumes, EU

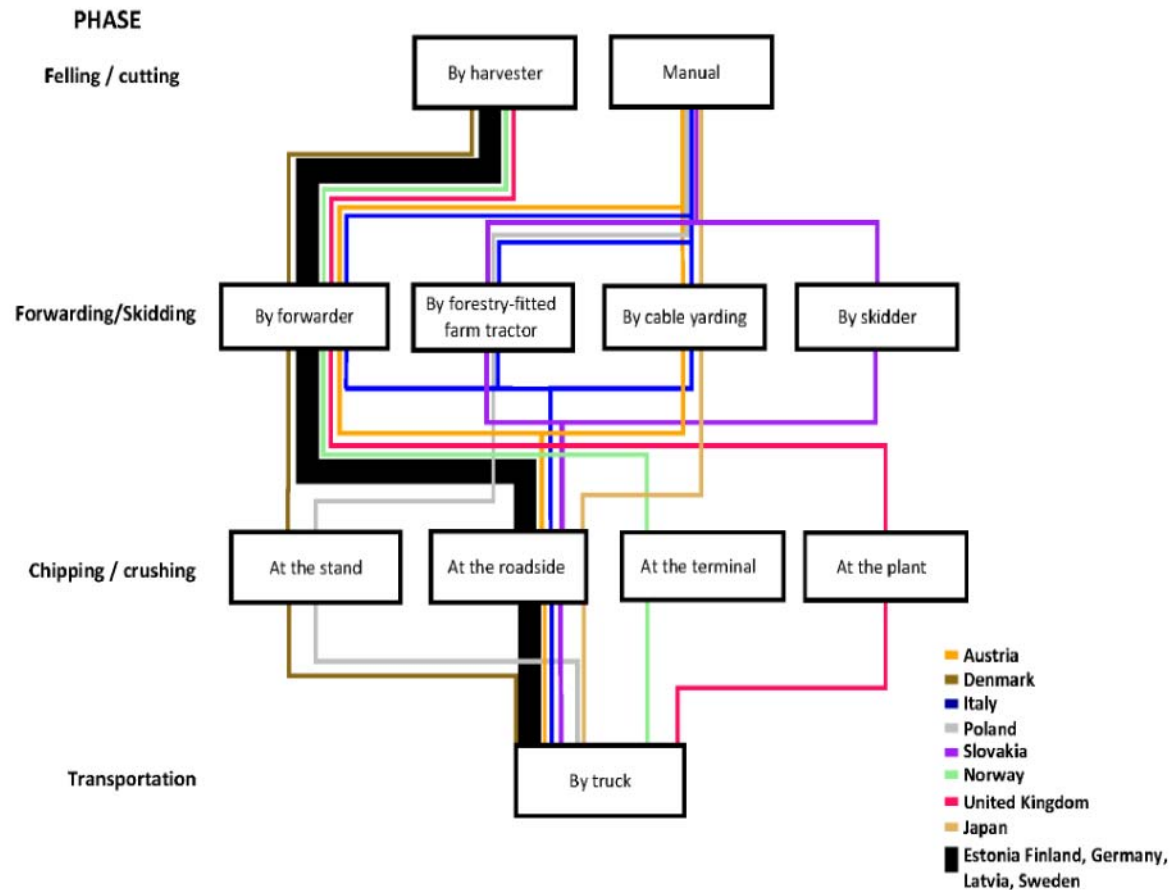

Mechanization in cutting

CTL vs. TL –methods globally

Harvesting systems for logging residues

Source: Diaz 2010

Intelligent car

Driver assistant systems

- ABS, ESC
- ACC (Adaptive Cruise Control)
- Driver Drowsiness

Cooperative systems

- Extended Environment Info
- Obstacle and Collision Warning

Location based systems

- In-vehicle emergency call
- Car-to-Car Communication

Source: Intelligent Car 2011

Intelligent forest machine

Operator assistant systems

- Tutoring and feedback on work cycles
- Economic driving
- Driver drowsiness

Cooperative systems

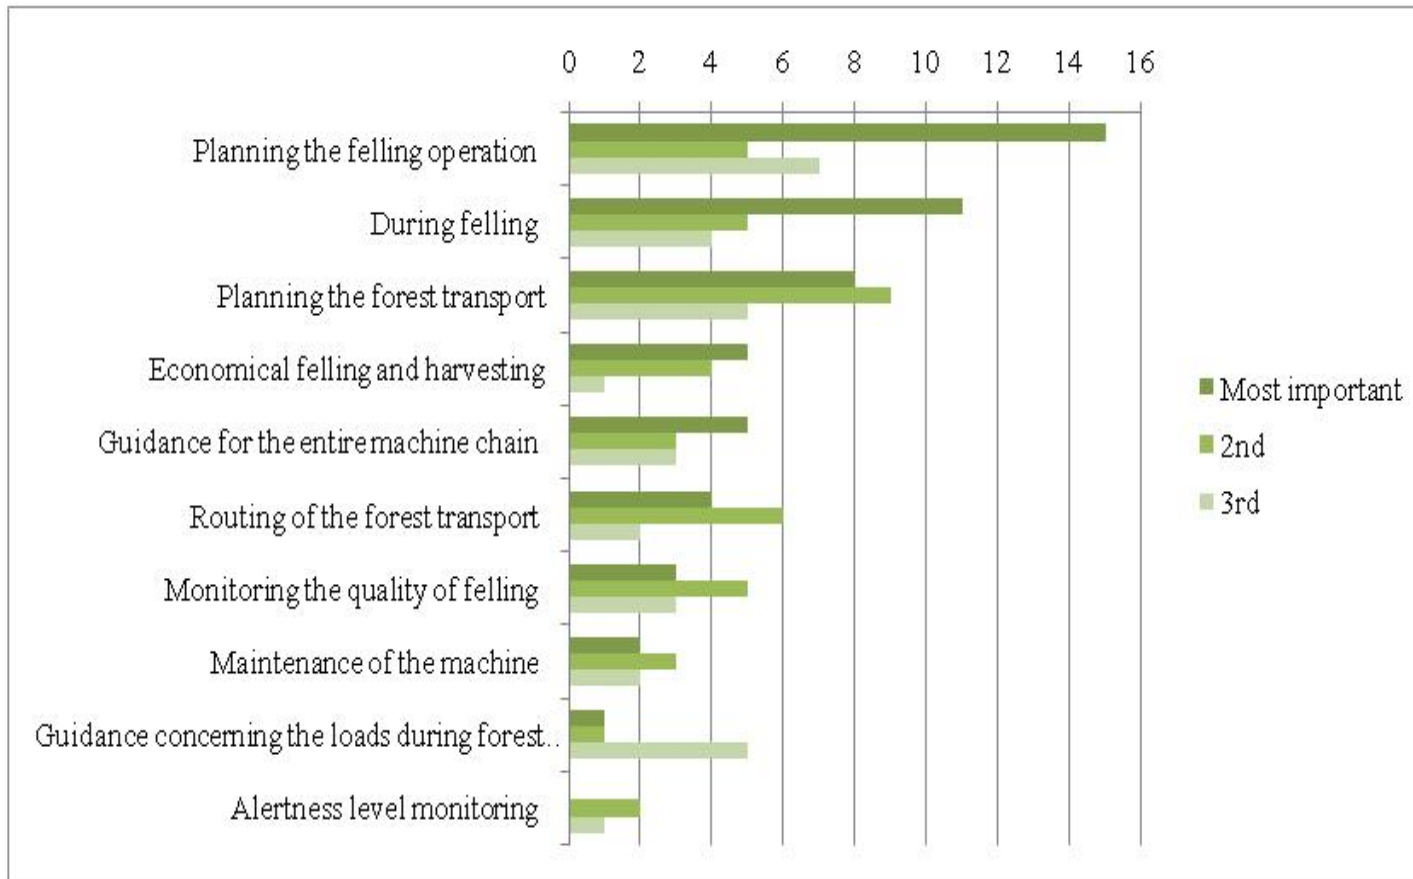

- Sensing of trees, soil
- Obstacle, power line, hiker warning

Location based systems

- Tree map generation
- Machine to machine communication (location of timber, soil trafficability)

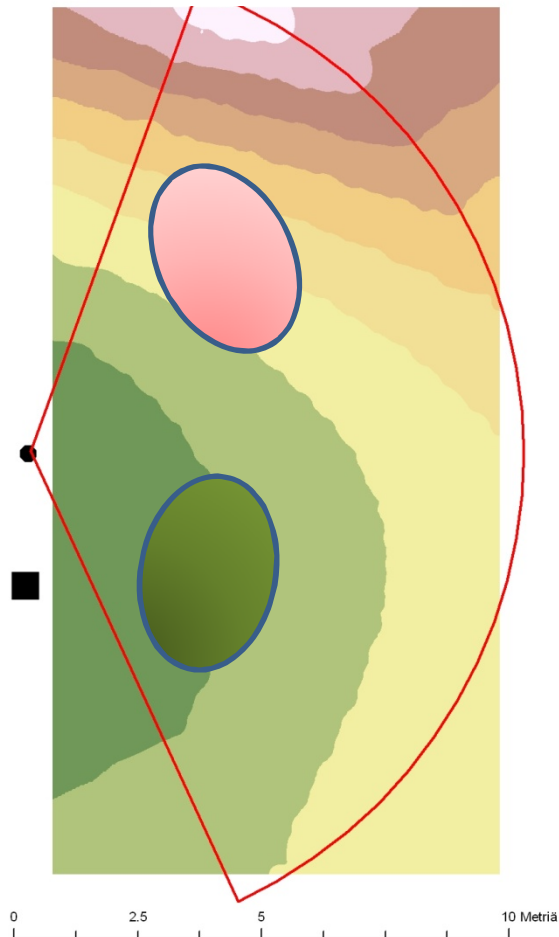

Where virtual tutor could be used?

Source: Riala 2011

On-the-job tutoring: where to load?

Clear cutting

Thinning

Conclusions

- Demand of woody biomass increases inducing large investments in harvesting and transport fleet
 - Technology selection
 - Operator availability
- Energy biomass demand a main development driver of harvesting technology
- Labour input can be reduced
 - Operator tutoring and semi automation will penetrate commercial level in a decade
 - Mechanization in cutting continues

Conclusions

- CTL: cutting edge development in EU
 - Growth of markets outside EU
- Decline of European pulp & paper industries may reduce the demand
 - Emerging biorefineries enter the scene in late 2020's
 - Switch from fresh to dry wood deliveries
- Massive biomass storages and need for their monitoring and management increases
